TRENCH DRAIN SYSTEMS

Quality products backed by reliable suppliers.

High Performance Concrete (HPC)

Our HPC System is made from cement-bonded fiber composites which react to changes in temperature in the same way as the surrounding concrete. This achieves a continuous integral unit reacting and flexing with the environment delivering a long service life for the entire channel system. HPC has the best adhesion with surrounding concrete unlike polymer concrete which has a demolding wax layer that never allows the concrete to bind with the channel body.

- Molded and hydraulically pressed.
- Resistant to frost down to -40°F (-40°C).
- Resistant to de-icing salts.
- Free from artificial resins or solvents.
- 100% Recyclable.
- Pre-Sloped 4", 6", 8", and 12" widths with Galvanized or Cast-Iron Edge Rail and multiple grate options.

Slot Drain Systems

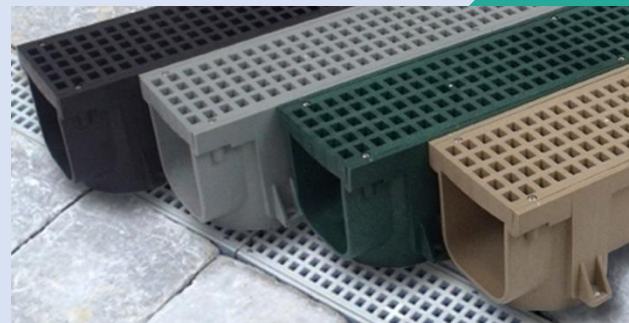

Simple, low maintenance, and a cost-effective solution for concrete floor drainage. This non-grated, pre-engineered slotted trench drain is installed into a concrete floor and designed to remove surface water through a single slot that opens into a trench which directs drainage to a connected sump.

- Pre-Sloped System with a 1/2" or 1" opening.
- 2", 4", or 6" I.D. in Galvanized or Stainless-Steel Finish.
- Simple installation with numbered channels and welded brackets for leveling.
- 5ft and 10ft Sections – Light weight and easy to handle.
- Cleaning Paddle included for trouble free maintenance.

Polypropylene Channel System

Our Polypropylene Channel Drain System is engineered to deliver the most flexibility in a heavy-duty design. Rated for H-20-wheel load rating when cast in reinforced concrete, it offers a modular design with interlocking components to enable quick and easy connections. Each segment is 4' in length and comes with a reversible ADA compliant grate that can either be flat or allow for a 3/16" convex surface.

- Economical
- Can be cut down to 12" increments.
- 8 Anchor positions for rebar installation to prevent floating.
- 4 Drainage ports on each 4' section for 3" or 4" pipe.
- Stainless Steel hardware - no rusting.
- Joints slide together and are secured with hardware.
- Sumps/catch basins available.
